

THE PRODUCTION

CLUB

GREEN BOOK

In The Production Club we want to be as sustainable as we can, so let's work together to comply with this Sustainability Protocol.

The Production Club is member of:

CLIMATE
NEUTRAL
NOW

GREEN.
THE BID

At The Production Club we set our agenda for 2022 as the year we would **embrace sustainability**.

Since then, we have been gathering as much information as possible to create our Sustainability Protocol. A Protocol that serves as a guide to achieve sustainable productions, and which is constantly **evolving to improve our practices**.

Through this Sustainability Plan, we **reduce, measure and compensate** our shootings; also involving our suppliers in the processes, because just by working together we can transform the industry and be more respectful with the environment and the people around us.

1. SET: COMMUNICATION AND AWARENESS
2. ACOMMODATION
3. MOBILITY
4. ENERGY
5. MATERIALS
6. WASTE
7. CATERING AND WATER

GOOD PRACTICES IN ENVIRONMENTAL SUSTAINABILITY ARE DIVIDED INTO 7 CATEGORIES

AND WE MUST GIVE THEM THE IMPORTANCE THEY DESERVE IN TERMS OF **COMMUNICATION AND AWARENESS**

SET: COMMUNICATION AND AWARENESS

- Minimizes **noise and light pollution** by controlling lumens (light measurement unit) and decibels (sound).
- The set will be signposted with the necessary **posters**.
- Don't forget to read the **specific protocol** of your department and the **guide of good practices in sustainability** (from the Spanish Film Academy) to make environmentally friendly audiovisual productions together.

SPECIFIC PROTOCOLS

ART

MAKE UP & HAIR

WARDROBE

ACCOMMODATION

- When choosing accommodation, look for hotels that are **as close as possible to the place of work**, to reduce the number of kilometers traveled in the commute of your teams and actors from the hotel. This is a vital point to reduce costs and, above all, environmental impact.
- Also, if possible, prioritize the hiring of **sustainable hotels**, which respect the environment with clear policies in this regard.
- *The Meliá, NH, Hilton and Ibis groups, among others, have sustainability policies in most of their hotels.*

MOBILITY

- **Prioritize the train over the plane**, as it emits less kg of CO2 per km and per passenger. The emissions of a Madrid-Barcelona trip by train are 17.2 kg of CO2, the footprint will be multiplied by 7 if the same trip is made by plane (115.7 kg of CO2).
- If you have no choice but to use the plane, choose airlines that are committed to sustainability, such as Iberia.
- When requesting cabs or VTC, give preference to **hybrid and electric vehicles**. The Production Club has an account with Taxi Ecològic whose fleet is 100% electric or hybrid.
- It encourages the use of **public transport** and if it is not feasible, it plans well how to share vehicles with efficient transport orders.

ENERGY

- **Turn off all lights** in rooms and common areas and **unplug all devices** while they are not in use. If we comply with this rule, we reduce energy consume by more than 10%.
- On laptops, **activate the screen lock** (if they are monitors, turn them off).
- Prioritize electronic devices with certifications of **efficient consumption**, you will greatly reduce energy consumption.
- Choose **renewable energy sources**, avoid or reduce the use of fossil fuel generators.
- **Take advantage of natural light** whenever possible and, if necessary, use efficient low consumption lights.

MATERIALS

- **Reuse** is the key to reducing environmental impact in the materials category. We will reuse, whenever possible, from previous productions or rent as much as possible.
- **Buying second hand** is also a more sustainable option if there is no possibility to rent or reuse.
- Buy materials that offer guarantees of **sustainability and respect** for the environment.
- If there is no other option but to buy or build for production, try to **reuse them later or donate them to social projects**.
- Take special care that chemical residues, paints and other types of spills do not accidentally reach drains or public sewers.
- Encourage local purchasing and local employment generation in the area where production takes place.
- Use **ecological and animal cruelty-free** hair and make-up materials.
- Do not use disposable wipes but sponges and washable kitchen towels.
- Try to use **sustainable clothing** brands.

WASTE

- We will communicate a policy that invites all employees **not to print** anything that is not essential. We will support a "**paperless**" policy and we will remember not to print in all emails we send.
- We will send shooting and transport orders by email.
- We will enable in Combo a **QR** to download the Booklet, thus avoiding having to print them.
- There will be no general waste garbage cans in Combo or Set, but we will set up **recycling points** and we will signpost them in an appropriate way to inform the personnel of the correct use of them.
- We will designate a **waste manager** in the set to ensure the correct weighing, recycling and deposit in the clean point.
- Whenever there is hazardous waste, we will hire a specialized manager to treat it.

WE COUNT ON YOU TO MINIMIZE OUR CARBON FOOTPRINT

CATERING AND WATER

- Try to make menus prioritize **vegetables, legumes and fruits**. And avoid as much as possible the consumption of red meat and its derivatives.
- Try to make catering companies bet on **organic, local and seasonal products**.
- Ask the catering and cleaning team to use soaps and detergents that are as environmentally friendly as possible.
- Try to ensure that the contracted catering companies apply sustainability measures: do not use plastic containers, recycle, work with local products, etc.
- Let's try to make sure that everyone brings **their own water bottle to refill** it in the dispensers whenever possible (in case they do not bring them, the production company will provide them). If for some reason it is impossible, we will buy bottles from brands whose containers are made of **recycled and recyclable plastic**.

THANKS!
